Network Assessment

Gain clarity. Reduce risk.
Build a smarter network roadmap.

TECHNOLOGY & SECURITY EXPERTS

Our Network Assessment provides a structured evaluation of your network environment. Findings are translated into actionable recommendations that support confident, data-driven decisions.

What is a Network Assessment?

A Network Assessment is a comprehensive review of your current network architecture, performance, security, and operational maturity. Our experts analyze how well your network supports today's business demands while preparing for future growth, modernization, and compliance requirements.

Assessment Scope

- Network architecture and connectivity review
- Hardware, software, and lifecycle inventory
- Performance and reliability analysis
- Security and access controls

Deliverables

- Executive summary and network health rating
- Current-state documentation
- Findings with risk prioritization
- Gap analysis

Risk & Compliance

- Identification of security and operational risks
- Firewall, segmentation, and monitoring review
- Alignment to industry frameworks (NIST, CIS, HIPAA, PCI DSS)
- Risk severity and control gaps

Recommendations & Outcomes

- Prioritized remediation roadmap
- Improved reliability and performance
- Reduced security and compliance risk
- Clear modernization path
